Nervus Vagus Training

With amazingly simple, practical exercises - and without physical exertion - your nervous system can be switched from stress, fight or flight to relaxation and regeneration. This can improve blood pressure, digestion, sleep quality, vision and perceived calmness. This sometimes happens within just a few minutes. The vagus nerve, which makes this possible, is therefore often referred to today as the "self-healing nerve". You can find out how this works here.

Hence all elevations appear altered, in an artificial but formal language, creating new perspectives on the respective landscape.
